

**TWISTECHNOLOGY**

**NEW DEVELOPMENTS IN  
MULTI-BALLOON TWISTING  
APPLIED TO DELICATE FIBERS**

**EUROCORD &  
CORDAGE INSTITUTE  
JOINT CONVENTION**

**Vienna, June 15<sup>th</sup>, 2022**

**MIQUEL MOIX**

## ✓ Twisting delicate fibers

Well below 6,000 Dtex.

## ✓ More efficiently

More output per spindle.

Lower power consumption / output ratio.

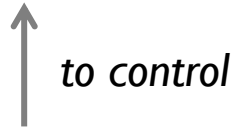

## ✓ With the multi-balloon technology with EMB

Twisthole technology enhanced with the EMB (Electronic Moving Bar) system.

# Twisting with conventional methods

## RING TWISTING – MONO-BALLOON

Specific balloon shape desired

**Traveller weight**  
(+ control ring)

Adds extra winding tension on  
the system

**Limits max. RPM**

# New Twisthole system + EMB RING TWISTING – MULTI-BALLOON

Balanced, self harmonically-controlled  
multi-balloon

**Reduced** Traveller weight  
(control ring)

Adds minimal winding tension on  
the system

**Higher max. RPM**

1000 –  
2000\* mm  
(\*The higher  
the better)

# ADVANTAGES OF MULTI-BALLOON SYSTEM + EMB

- ✓ Increasing production up to 50%:

Due to lower working tension in traveler, we can spin much faster in most cases with lower deniers.

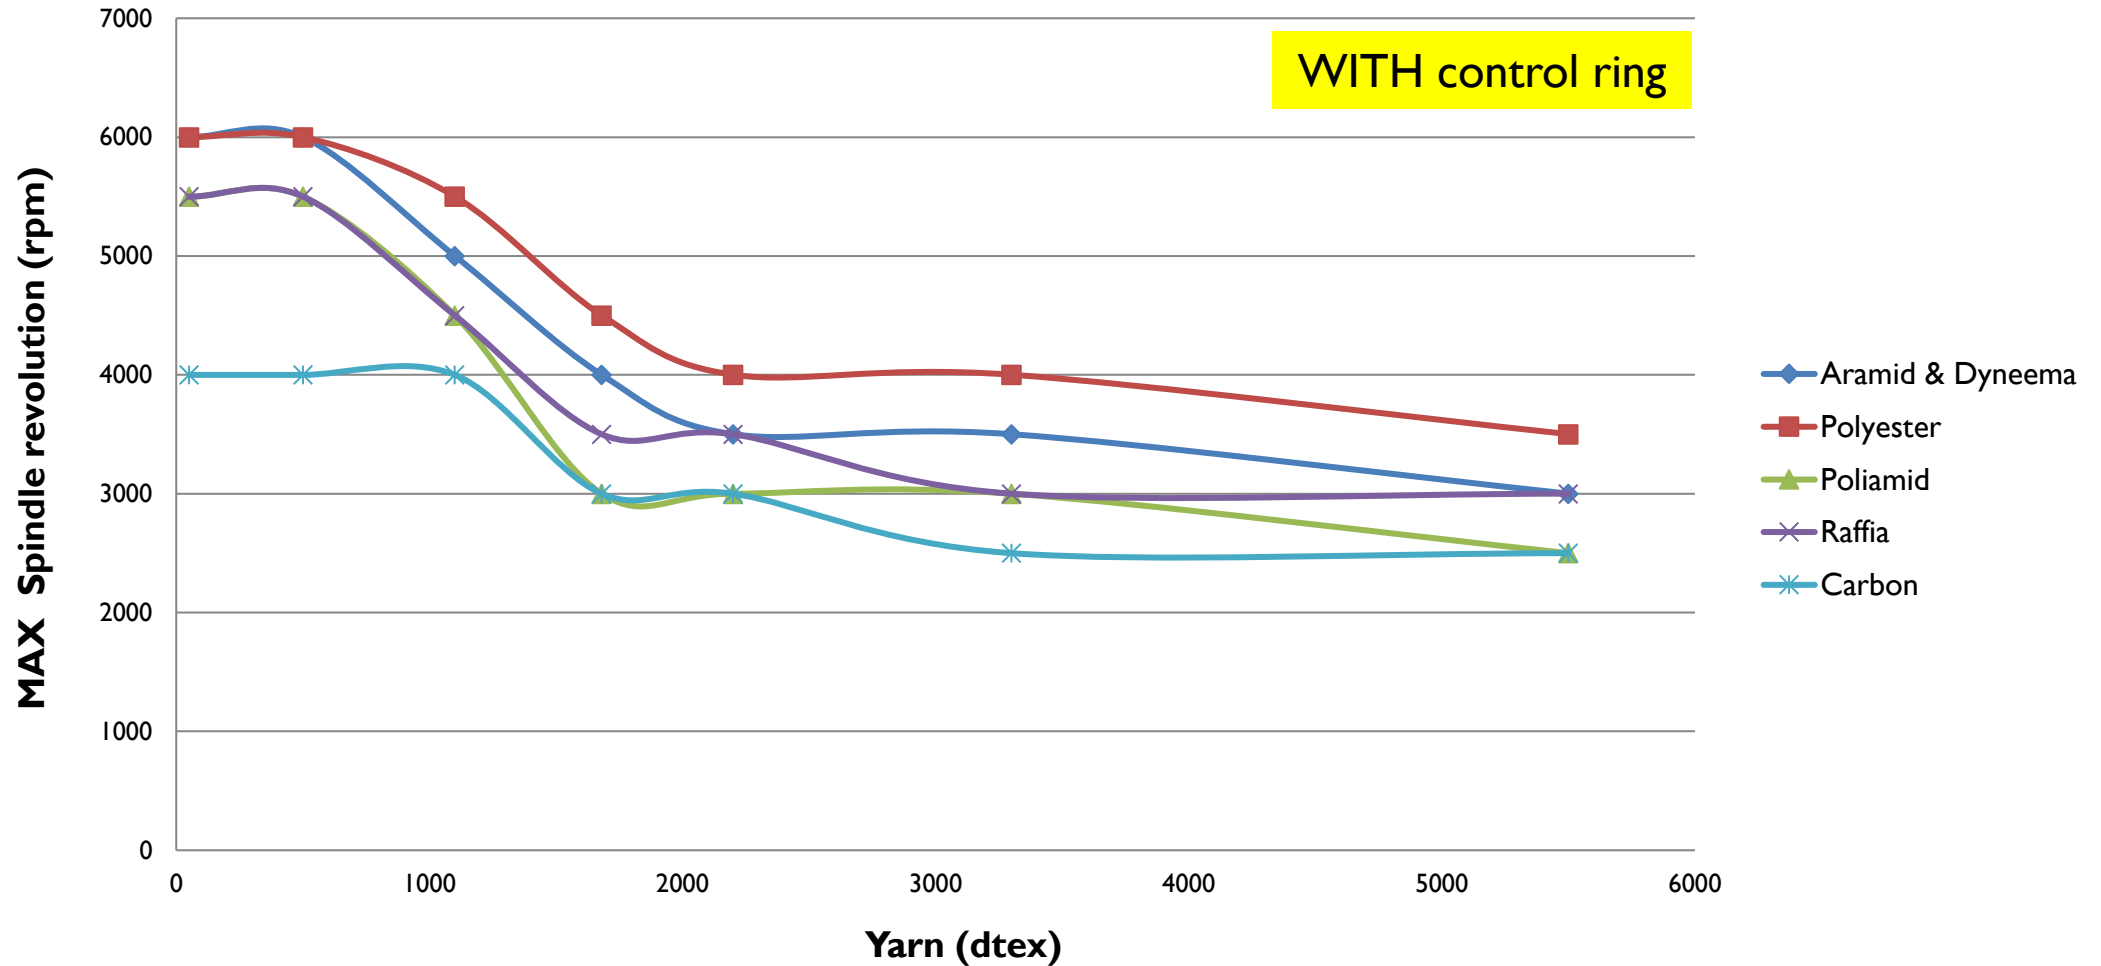

- ✓ Reduction of energy consumption above 20%:

Even if absolute consumption is higher (faster spinning), the consumption/output ratio is considerably lower.

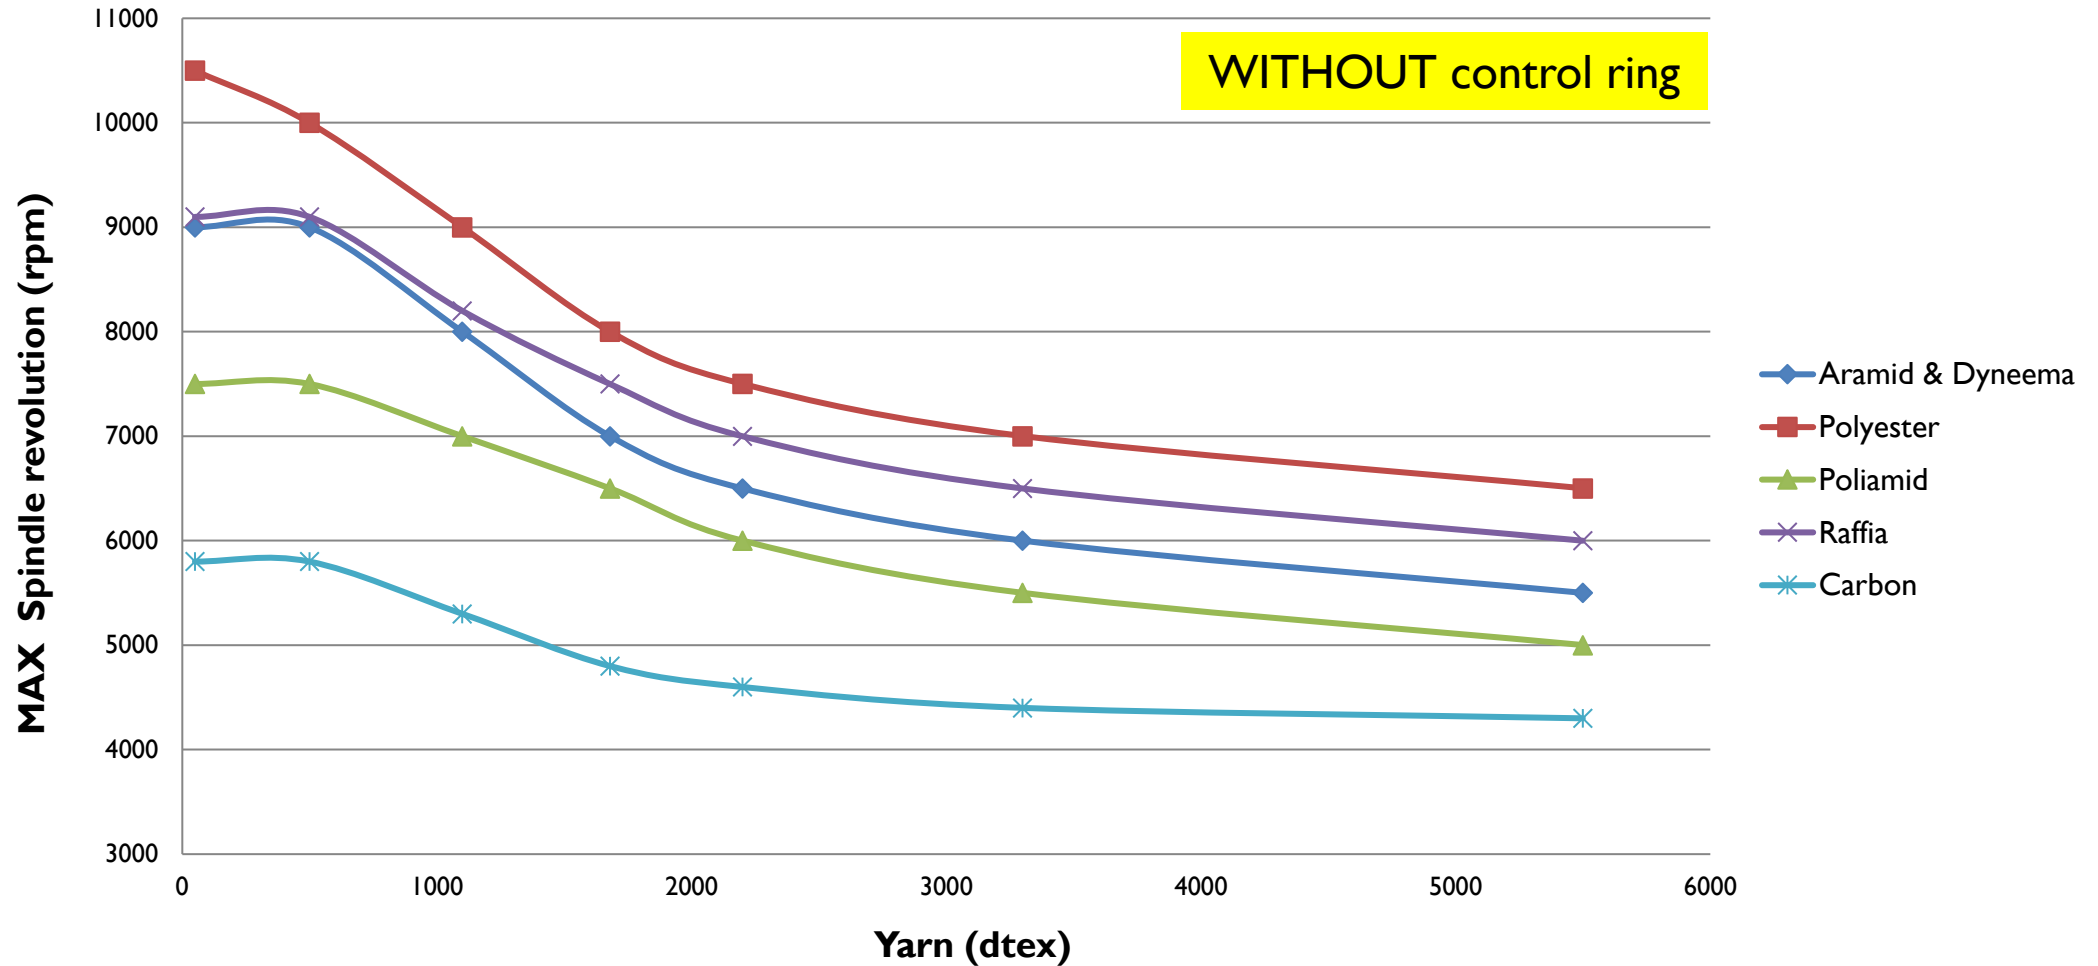

- ✓ More control with the EMB:

Regulation of guide yarn with different configuration parameters for a more balanced control of balloons, customized yarn-by-yarn.
